

Gaurang Mohan

New York, NY | (480) 806-7303 | gaurangmohan25@gmail.com | linkedin.com/in/gaurang-mohan | github.com/gauranngg7

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, SQL, Java, C++

LLM & Agents: LangGraph, multi-agent orchestration, RAG, MCP/FastMCP, adversarial evaluation, guardrails

AI / ML: Hugging Face Transformers, PyTorch, scikit-learn, Groq, Whisper, Gemma, sentence-transformers

Backend & Data: FastAPI, Pydantic, gRPC/protobuf, PostgreSQL, ChromaDB, Firebase Firestore, Pandas

Infrastructure: Docker, Kubernetes, AWS EKS/ECS/RDS, GCP Cloud Run, Terraform, Kafka, Cloud Build

Reliability & Security: pytest, Prometheus, Grafana, OAuth2, Firebase Auth, RBAC, structured error handling

EXPERIENCE

AI & ML Backend Engineer · APMAC Consulting

Sept 2025 – May 2026

Remote — Edmonton, AB

- **Built async FastAPI/Pydantic endpoints** serving AutoML and OLS models behind RBAC, with 95% confidence intervals.
- **Containerized services for AWS** using Docker/Terraform; implemented branch-based OAuth2 CRM integration with signed requests and replay protection.

AI Engineer · CueAway Technologies

Oct 2024 – Oct 2025

Remote

- **Designed planner, retriever, vision, and recommender agents;** improved retrieval relevance by 35% and reduced irrelevant outputs by 28%.
- **Built RAG, multimodal, GAN, and PyTorch recommendation workflows** for virtual try-on; achieved recommendation latency under 200 ms.

Project Team Lead & Embedded ML Engineer · Visionary Hands

Jan 2024 – Dec 2025

Academic project · EPICS at ASU · Tempe, AZ

- **Built flex/IMU processing** and gesture-classification workflows for an ESP32 ASL glove; tested with 10 users and earned EPICS Elite Pitch third place (\$1,000).

PROJECTS

Baseline — Agentic Financial Analysis Platform

June – Aug 2026

Open app · GitHub | LangGraph · Groq · FastAPI · FastMCP

- **Built a four-agent LangGraph workflow** with Llama 3.3 70B (since migrated to gpt-oss-120b), deterministic pandas calculations, and three FastMCP tools verified in Claude Desktop.
- **Improved structured-error handling** from 62% (18/29) to 100% of cases run (27/27; two not run). Deployed Firebase-authenticated Next.js/FastAPI; kept gRPC, Kafka, and observability in local Docker Compose.

Bellwether — AI Evaluation and Observability Framework

Aug 2026

Open app · GitHub | Python · SQLite · Next.js

- **Evaluated 60 synthetic scenarios** across seven dimensions; isolated reference labels from generator/evaluator context and surfaced independent risk readings.
- **Implemented prompt-version comparison** and a nonzero-exit deployment gate; blocked three metric regressions in offline mock runs despite unchanged urgent recall. Published a snapshot-backed dashboard.

Agentic OSINT Analyst — Public Record Research Prototype

Open app · GitHub | LangGraph · Chroma · FastAPI · Next.js

- **Unified OFAC, SEC EDGAR, and CourtListener records** into a MiniLM/Chroma index; built a two-node retrieval/synthesis workflow with cited excerpts, source inspection, and prerecorded demos.
- **Compared vector, BM25, and RRF retrieval** on 17 queries: mean recall@10 of 0.471, 0.412, and 0.529; documented incomplete labels and kept retrieval metrics distinct from answer quality.

SignLink — Voice to Sign Video Pipeline

May 2025 – June 2026

Open app · GitHub | Whisper · Gemma · Streamlit · FFmpeg

- **Integrated speech recognition**, gloss generation, sign-clip lookup, and FFmpeg rendering; decoupled hosted model inference to address container memory constraints and added fingerspelling fallbacks.

EDUCATION

B.S. Computer Science · Arizona State University — Ira A. Fulton Schools of Engineering

May 2026

Cum Laude · GPA: 3.40/4.0 · New American University Scholar (\$13K/yr merit award)
